

Cornerstone

- **Problem:** The Air Force Office of Special Investigations (AFOSI) quickly needed to track foreign-nationals visiting hundreds of installations world-wide.
- **Solution:** Aspex developed and deployed a Web-based user-friendly tracking system on a secure DoD network within 9 months.
- **Result:** The Cornerstone system was deployed at 174 Air Force security offices world-wide within the 9 month deadline. Aspex used Oracle 9i technology with special purpose PL/SQL & JAVA routines making the system "active." DoD has adopted the system for all counter-intelligence agencies with over 3000 users world-wide. Other homeland security agencies are also active users of Cornerstone.
